

Mamba3Yolo — Camera-Ready Checklist

Full pre-submission checklist for CVPR / ICCV / ECCV / MICCAI / TPAMI

1. Paper Content

- Title concise and contains key terms (Mamba-3, real-time, detection, edge/explainable)
- Abstract $\leq$ venue limit, states problem / method / key number / implication
- Introduction has clear gap statement and 3–5 contribution bullets
- Related Work groups papers and discusses closest prior work (Mamba-YOLO, Mamba-3, MambaOut)
- Methods fully re-implementable; key Mamba-3 equation present
- Experiments: strong baselines, ablation of each Mamba-3 component, multi-seed if claiming significance
- Latency measured on same hardware; Jetson / edge numbers if claiming edge suitability
- Medical results per-domain + average; quantization drop reported
- Limitations discussed honestly

2. Formatting

- Official style file used (cvpr.sty or equivalent)
- Page limit respected (usually 8 pages excl. references for conferences)
- Two-column, 10 pt, Times; line numbers for review version
- Blind submission cleaned (no names, no self-identifying GitHub if required)
- All fonts embedded; no critical overfull boxes

3. Reproducibility

- Code public (or anonymized link)
- requirements.txt / environment pinned
- Configs + training commands documented
- Seeds fixed and reported
- Weights will be released

4. Final Package

- main.pdf (camera-ready)
- Source archive (.zip) with all .tex, .bib, figures
- Supplementary PDF
- Copyright form signed
- Author response addressed (if post-rebuttal)

Current Mamba3Yolo Status

- Architecture TikZ + PDF ready
- main.tex + supplementary.tex ready
- Checklist ready
- Replace placeholder numbers in tables with real Kaggle / experiment results before submission
